[Do Not Miss Sepsis Needles in Viral Haystacks!](#)

Michelle Hamline, MD, PhD, MAS and Ulfat Shaikh, MD, MPH | March 27, 2024

A five-year-old girl presented to the emergency department (ED) with symptoms of an upper respiratory tract infection. A viral swab was negative for SARS-CoV2, influenza, and respiratory syncytial virus. A throat swab was positive for group A...

[A Missed Bowel Perforation - the Importance of Diagnostic Reasoning](#)

Leah Timbag, MD, MPH, Voltaire R. Sinigayan, MD, and Mithu Molla, MD, MBA | September 27, 2023

This case describes the failure to identify a brewing abdominal process, which over the span of hours led to fulminant sepsis with rapid clinical deterioration and eventual demise. The patient's ascitic fluid cultures and autopsy findings confirmed...

[Sepsis Resulting from Delays in Treatment and Miscommunication among Specialists](#)

Lucy Shi, MD and Erik Noren, MD, MS | March 15, 2023

A 71-year-old man presented to his physician with rectal bleeding and pain, which was attributed to radiation proctitis following therapy for adenocarcinoma of the prostate. He subsequently developed a potentially life-threatening complication of...

Innovations

[Remote Response Team and Customized Alert Settings Help Improve Management of Sepsis](#)

May 31, 2023

Seeking a sustainable process to enhance their hospitals' response to sepsis, a multidisciplinary team at WellSpan Health oversaw the development and implementation of a system that uses customized electronic health record (EHR) alert settings and a...
